

SPCC Compliance Services

Compliance Services and Consulting

GES has inspected and prepared Spill Prevention, Control, and Countermeasure (SPCC) and similar compliance plans across the country for commercial and industrial facilities – from back-up generator installations to large oil storage and distribution facilities. Our staff offer expertise in various aboveground storage tank (AST) and underground storage tank (UST) regulations promulgated at the state and federal programs, including the Oil Pollution Prevention Regulation (40 CFR Part 112).

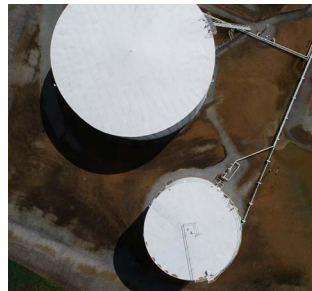

GES' Experience with SPCC Plans includes:

Preparation and certification of SPCC plans for 115 facilities across 15 states for a global telecommunications company

Preparation of new and updated SPCC plans for 400 fueling and distribution facilities across 43 states for a trucking company

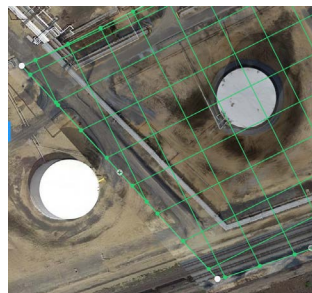

Drone used to assist with secondary containment volume calculation and adequacy determination

New and updated SPCC plans for 30 concrete aggregate and mixed concrete facilities; and 25 railroad maintenance and intermodal yards on the West Coast

New and updated SPCC plans at 12 power stations across Florida

Visual oil storage asset inspection and secondary containment assessment data provided by a drone

Areas of Expertise

- SPCC plan development
- Site inspection
- Oil and regulated activity determination
- Oil-storage vessel inventory
- Facility map preparation
- Discharge potential analysis
- Spill prevention best management practices
- Secondary containment determination
- Emergency response planning
- Discharge cleanup and response planning
- Tank inspections
- Federal, state, and local requirements
- Plan PE certification
- Facility inspection and plan recertification
- Drone (sUAS) inspection and data collection
